

## Small to medium sized lead acid battery recycling plants: Tilting Rotary Furnaces as reduction units

This presentation will describe the benefits for battery manufacturers of 'in-house' recycling of used lead acid batteries and will present small to medium sized plants specially designed with battery manufacturers in mind. Comparisons will be made between two types of reduction techniques using the Short Body Rotary or the Tilting Rotary. Advantages and inconveniencies will be discussed and the experience of several end users will to illustrate the presentation.

Presentation will be made by Mr John Simpson, Commercial Director of Dross Engineering.
