SECONDHAND 18 TONNE TILTING HOLDING FURNACE

We have recently taken an order from Hydro Aluminium in France to supply a 25 tonne holding furnace for their casthouse facility near Chartes, France. This furnace will replace an exiting 18 tonne tilting holding furnace designed by the Dross Engineering team in the 1990's. The furnace is in excellent condition and is being offered for sale in its present condition, fully serviced mechanically, hydraulically and electrically with the present refractory lining. This is a rare opportunity to acquire an 18 tonne capacity tilting holding furnace and we strongly recommend any interested party to visit the plant whilst the furnace is still in operation.
